4 REFLECTION

- Throughout the talk, we have gained lots of knowledge regarding ICT, especially the job scopes and the responsibilities. At the same time, jobs in ICT can contribute to economic growth in industry. This is because, millions of job opportunities are available, not only in development and management but the support systems of a product too. A good product made in the industry under the surveillance, quality-checking and so on from the ICT jobholders are able to ensure that the product meets the targetted quality and can be released to the public. Undeniably, a boost in the economic growth in industries are guaranteed with the release of a high quality product.
- We also get some clues and tips on how to survive in the career as a ICT jobholder. We have to always be eager and curious to learn new knowledge by ourselves through continuous learning and always be on par with the latest news especially in the ICT world. All knowledge is ready on Internet; the main difference is just our willingness to learn. Besides, we not only have to create a program that could run, but we need to create program that have the best performance and functionality, which is crucial to stand out from others. Lastly, our passion and love is compulsory for us to strive in ICT fields.
