The domain in technology consulting consists of Technology Information, Technology Solutions Delivery, EY Identity, SAP, Data & Analytics, Digital & Emerging Technology and Cybersecurity. Under the aspect of the career paths, the talk focused on SAP, project management and web development. The company culture was also presented where EY talked about how the company operates as a family, with flexible working hours, choice of working hours, work-life balance and interactive activities conducted among the EY family. The company offers learning through free Udemmy courses and mentorship too. From these insights, EY described the need for being an expert in one's technical area, the ability to be versatile, and exceptional personal characteristics required to thrive in a consulting career.

REFLECTION

- The talk has provided us with valuable insights onto the importance and impact of an SAP in today's world. To begin with, an SAP can assist an organization by converting their data into a single system. This can help the organization to ensure a seamless and efficient operation, reducing manual efforts by employees allowing them to focus on a more strategic planning. Additionally, the data gained from the SAP can help an organization gain insights into their businesses and realise their weak point and further improve on those particular parts to maximise efficiency. This highlights the essential role of an SAP in an industry to help them realise their businesses ensuring a seamless yet efficient production.
- Speakers of EY Consulting firm emphasized the importance of a growth-oriented mindset in every fresh graduate and employee as this mentality shapes an individual to learn, adapt and evolve within the ever-changing ICT environment. The curiosity of an individual fuels them to constantly learn about current technologies such as implementation of cloud solutions and blockchain in industries, which empowers them with necessary knowledge to change the future. Thus, prioritizing personal and professional growth is essential in order to remain relevant and valuable in ICT industry.
